

ABSTRACT OF THE DISCLOSURE

A snowmobile seat a flexible seat section disposed over a substantially rigid base that is disposed over an upper surface of a track tunnel of a snowmobile. The rigid base is formed of a closed cell foam with cell walls and cell voids such that the base section is substantially rigid and light weight, while the flexible seat section is formed of an open cell foam. A cover covers at least the flexible seat section to resist absorption of water by the open cell foam of the flexible seat section. The cover can include an upper seat cover and a lower seat cover coupled by a zipper.
